ABSTRACT

In 1993, both the American Library Association (ALA) and the National Commission on Libraries and Information Science (NCLIS) concluded that up-to-date statistics about school library media centers (LMCs) were needed in light of current state and local reform efforts and pending federal legislation related to the National Education Goals. A questionnaire was sent to school libraries in 12 states to obtain information for a "snapshot" of the current status of LMCs. This report begins with a letter to the President of the United States presenting the highlights of the findings, including the following: many LMCs are poorly equipped to support instruction; half of elementary school libraries buy less than one book per student per year; and almost no LMCs have access to the Internet. The introduction then describes the rationale for the study and the survey methodology. Also included are comments on the data, including observations on four topics: material resources, working with teachers, technology, and expenditures. The data are presented in the 26 tables that make up the major part of this report; they are arranged alphabetically by state. The information presented includes data on expenditures, items acquired, staff, currentness and quantity of resources to support the instructional program, rating of entire collection to support multicultural education, number of computers, and use of the LMC during the school week. The survey instrument is appended. (JLB)

April 1994

Honorable William J. Clinton
President of the United States
The White House
1600 Pennsylvania Avenue
Washington, D.C. 20500

Dear President Clinton:

The Members of the U.S. National Commission on Libraries and Information Science (NCLIS) are pleased to provide this report on Public School Library Media Centers in 12 States. The report results from the National Commission's concern that school libraries provide the resources and support needed to reconnect our young people to learning.

America's children and youth require school library resources and services to accomplish the systemic changes mandated by Goals 2000. However, the Commission's study of school libraries shows that libraries in our elementary and secondary schools are not equal to the challenge. School library improvement programs are needed to achieve excellence and equity for our Nation's students.

Since the 1991 White House Conference on Library and Information Services (WHCLIS) focused attention on children and youth literacy, the National Commission has learned some disturbing realities about school libraries. Our findings about the condition of libraries serving children and youth have a direct relation to legislation defining the Federal role in support of elementary and secondary education.

The Commission has found that libraries are not prepared to support a transition from "A Nation at Risk" to a nation of learners. Public and school librarians work closely together, closely following recommendations from the 1991 WHCLIS and from the 1984 Alliance for Excellence: Librarians Respond to A Nation at Risk. Libraries are sharing resources by linking school libraries with college, university, state, and public libraries. Success, however, requires that libraries and educational programs be better integrated to prepare all students to participate fully as workers, parents, and citizens. Federal leadership, support, and assistance are essential to achieve this successful integration.

By sharing the results of the Commission's findings about school libraries, we hope to provide background for the formulation of Federal programs for elementary and secondary education. The Elementary and Secondary Education Act (ESEA) can help libraries in elementary and secondary schools to meet the high performance standards set by Goals 2000: Educate America Act. Proposals for establishing instructional innovation and for classroom technology programs, along with targeted assistance for school library media center resources and services, require inclusion in ESEA.

If libraries serving elementary and secondary school students and teachers fail to receive Federal assistance under ESEA, then the disturbing reality of current conditions will block achievement of high-quality educational standards. In a 12-state survey of libraries in elementary and secondary schools performed in late 1993, the Commission found that:

- many school libraries are poorly equipped to support instruction
- ½ of elementary school libraries buy less than one book/student/year
- ½ of secondary school libraries buy less than .33 book/student/year
- almost no school libraries have access to the Internet computer network
- there is wide variance in average annual funding for school libraries
 - elementary school libraries receive \$15 to \$58,874 per year
 - secondary school libraries receive \$155 to \$100,810 per year
- in 31% of elementary school libraries the latest world atlas available has a copyright date before 1990
- in 21% of secondary school libraries the latest world atlas available has a copyright date before 1990
- much work is needed to provide opportunities for school library media specialists to work more closely with classroom teachers

In addition to these disturbing findings, the National Commission has heard from students, teachers, librarians, and other concerned citizens from around the country.

Sincerely,

Jeanne H. Simon
Chairperson

Acknowledgements

The authors wish to thank the National Commission on Libraries and Information Science (NCLIS) for supporting much of the cost of this survey. We are also very grateful to the school library media specialists who completed the questionnaire, to the state affiliates of American Association of School Librarians (AASL) who provided member lists and cover letters, to Jeanie McNamara and Sheril Bond who provided data from the South Carolina Study for Appendix A and to Keith Lance of the Colorado State Library who provided advice on Part III.

Thanks are due to many people at the American Library Association (ALA) who helped with various aspects of this project, especially Donald Adcock (AASL), Marie-Louise Settem (AASL), Gayle McLaughlin (ORS), and Dianne Rooney (Publishing).

PART I INTRODUCTION

Background

Role of the School Library Media Center

Information Power: Guidelines for School Library Media Programs, developed by the American Association of School Librarians (AASL) and the Association for Educational Communications and Technology (AECT) and published jointly in 1988, describes what school library programs can and should be in the 1990s and in the 21st Century.

The mission of the school library media program is to ensure that students and staff are effective users of ideas and information....Library media specialists serve as the link between students, teachers, administrators, and parents and the available information resources. The roles and services defined in this document are dynamic; they are changing and evolving in response to the societal, economic, and technological demands on education.

Since that concept was articulated in 1988, the range of formats for information resources has expanded as have the many demands on education. The vision described in *Information Power* has helped to guide school library media specialists in their work as members of educational teams that prepare students for life in a global society and an information age.

The recent movement toward national education goals puts emphasis on the need to prepare students to compete in the worldwide marketplace and make informed decisions about problems facing society. The physical and intellectual access to information provided by school library media programs and school library media specialists are essential if the national goals are to be met. At the state and local level, school library media specialists are involved in specific reforms such as resource-based instruction and site-based management.

Statistics on school library media centers

The U.S. Department of Education has collected statistics on school libraries since 1944. The most recent comprehensive national survey was conducted in 1985-86 and published in 1987 as *Statistics of Public and Private School Library Media Centers*.

Since that time, the National Center for Education Statistics (NCES) has developed a set of questionnaires for elementary and secondary schools known collectively as the School and Staffing Survey (SASS). Now on a 3 year cycle, the 1993/94 administration of SASS will include two new questionnaires, one on the school library media center and one on the school library media specialist. These questionnaires, developed in cooperation with ALA and NCLIS, were mailed to a sample of over 7,000 schools in late 1993. Results are expected in 1995.

While preparing these 2 surveys as part of the 93-94 SASS, NCES worked with ALA and NCLIS to formulate a small number (about 6) of items about school library media programs that could be imbedded in other SASS surveys. A report on those items is due in 1994.

Another important source of statistics about school library media centers in the 1980's has been the biennial report on "Expenditures for Resources in School Library Media Centers" published in *School Library Journal* since October, 1983. The most recent report, covering 1991-92, was published in October 1993. Because the survey universe is limited to *School Library Journal* subscribers, the data may be biased in favor of the most well-funded schools.

Rationale for this survey

In May 1993, both ALA and NCLIS concluded that up-to-date statistics about school library media centers were needed immediately, i.e., long before data from the 93/94 SASS would be released. Several interrelated events led to this conclusion. As that point, it seemed certain that the National Education Goals would soon be incorporated into legislation that would have a strong influence on national, state, and local educational reform. Also, state and local reform efforts were already moving forward in several places. The Elementary and Secondary Education Act was up for reauthorization, and there was strong interest among librarians and their supporters, in implementing the Omnibus Children and Youth Literacy Initiative that was a major recommendation of the 1991 White House Conference on Library and Information Services (WHCLIS).

In public hearings around the country, NCLIS was told that statistics were needed to describe the current status of school library media centers. ALA was hearing the same thing from its members and member leaders.

In order to fill the gap until the 1993-94 SASS data become available, ALA proposed to prepare a modified, shortened version of the SASS questionnaires and collect information from a sample of school library media specialists who are members of AASL affiliates in a carefully selected group of states. NCLIS agreed to provide partial funding for this project and to publish the report early in 1994.

Procedures

Questionnaire development

To facilitate timely collection and analysis of data it was determined that the questionnaire should be no more than three pages long. The instrument was created by selecting key items from the two new SASS questionnaires described earlier. All in the sample received a cover letter from the current president of AASL. In each state, a second cover letter was provided by the president of the state affiliate. The instrument was pretested on selected members of the Illinois affiliate and reviewed by members of NCLIS. It proved to be reasonably easy to complete and tabulate except for one part of

one question. Many respondents were unable to complete column C of question 5 which asked for locally budgeted expenditures on six different categories of materials (see Appendix B).

Selection of states

Twelve states were selected that collectively met the following criteria:

- states that have been actively involved in developing state-wide education reform plans;
- states from each of the four regions of the country that are commonly used in social surveys (i.e., North Atlantic, Great Lakes and Plains, Southeast, West and Southwest);
- states with Congressional delegations that show interest and involvement with Federal programs related to school library media centers and to education reform;
- states from each of the seven AASL membership regions.

The NCLIS Executive Director and several NCLIS Commissioners reviewed and approved the list of states.

Selection of sample

In order to keep the survey to a reasonable size and still have enough responses to represent each state, it was decided to select 15% of the affiliate's membership or at least 50 from each state. Affiliates were asked to provide printed membership lists which served as sampling frames.

Survey participants were selected by AASL and ORS staff following standard procedures for random samples. The process was complicated by the requirement that, as far as possible, only building level people in public schools could be selected. If it could be determined from the name or address that an affiliate member did not meet these two criteria (e.g., worked in a public library, worked for a vendor), that person was not selected. Also unacceptable, except in California, were people with the title "volunteer," "aide," or "clerk." (These titles were accepted in California because often such people are the only staff present in the library media center (LMC).) Selected names were keyed into a database by AASL staff and label sets were generated.

Conducting the survey

The University of Illinois Library Research Center handled two mailings, processing of returns, data entry, and tabulation of results. The first mailing to the entire sample of 1318 was done on September 15th. A second mailing was sent to nonrespondents on October 13th. By November 8th, returns had been received from 795 respondents for an initial response rate of 60.3%. Another 30 responses were received too late to be used.

Of the 795 received in time, 89 were not useable, primarily because the respondent answered "No" to question 1, "Are you currently employed as a school library media specialist at the building level in a public school?" The 706 useable responses provided a useable response rate of 53.6%. Table A describes the sampling frame, sample, and response in each state.

Table A. Sampling frame, sample, respondents

	# in Affiliate	# in Sample	% Response
Arkansas	138	48	48
Arizona	288	50	46
California	1,543	279	52
Illinois	899	134	67
Kansas	697	103	49
Kentucky	568	88	57
Massachusetts	388	58	55
Michigan	1,200	171	50
Oregon	750	117	51
Pennsylvania	1,226	182	54
Rhode Island	325	49	57
West Virginia	51	39	51

Caveats in using these data

It is important to understand several limitations in these results. Although the data were gathered and analyzed as carefully as possible, existing time and budgetary constraints required compromises.

- **Sampling frame:** Membership lists of AASL affiliates in the 12 states were chosen as the sampling frame for this study because such groups are known to have a high level of commitment to the field and therefore could be expected to respond quickly and completely. Also, ALA has easy access to membership lists of these groups and to the officers who could write cover letters. Since time was essential, this was a reasonable choice. However, it does mean that the data represent school library media centers where AASL affiliate members work, and these centers may or may not be typical of those throughout the state.
- **Small numbers of cases:** Since many tables display results using percentages, it is important to remember that for some states and/or levels the numbers of respondents (i.e., N) was fairly small. Therefore, what looks like a large percentage may actually represent a small number of cases.
- **Scope:** The report of the 1985-86 NCES study presented separate tables for public schools and private schools. In both cases schools were grouped into several different categories and then further subdivided by enrollment size. When a report of the 93/94 survey is done, it will use similar breakdowns. This NCLIS/ALA survey covers only public schools and subdivides only into three levels (elementary, secondary, combined).
- **Generalizability:** Although the states were chosen to represent different regions and conditions, the combined results (see table for twelve states) **should not** be assumed to represent the nation as a whole. This table was produced as a tool for studying any one state in the context of all twelve.

Replication in other states

NCLIS and ALA/AASL encourage other states to use the questionnaire developed for this survey. Please contact the AASL office for additional information and for a revised instrument that corrects flaws.

Description of tables

The tables following the introduction and comments present results for each of the 12 states followed by results for all 12 states combined. Tables were designed using the 1985-86 NCES report as a guide. Whenever appropriate, both means and medians are provided. Results for combined schools are not shown in eight states because fewer than five individuals responded. In the other four states

than five individuals responded. In the other four states (California, Michigan, Oregon, and Pennsylvania) results are also shown for combined schools. The following 26 tables are given for each state:

Table 1	Dollars spent for material by funding source, 1992-93
Table 2	Dollars for materials, percent contributed by each funding source, 1992-93
Table 3	Total expenditures for materials per school and per pupil, 1992-93
Table 4	Books acquired per pupil per school, 1992-93
Table 5	Items acquired, 1992-93
Table 6	Items held at end of year, 1992-93
Table 7	Books held per pupil per school, end of year, 1992-93
Table 8	Full-time employees, 1992-93
Table 9	Currentness of resources to support instructional program, percent of elementary schools choosing each rank for each of fourteen topics
Table 10	Quantity of resources to support instructional program, percent of elementary schools choosing each rank for each of fourteen topics
Table 11	Currentness of resources to support instructional program, percent of secondary schools choosing each rank for each of fourteen topics
Table 12	Quantity of resources to support instructional program, percent of secondary schools choosing each rank for each of fourteen topics
Table 13	Rating of entire collection to support multicultural education
Table 14	Copyright date of most recent multi-volume encyclopedia
Table 15	Copyright date of most recent world atlas
Table 16	Average copyright date of books on "health/medicine", percent of schools by year
Table 17	Average copyright date of books on "space", percent of schools by year
Table 18	Number of microcomputers under supervision of LMC staff, percent of schools at each grade level
Table 19	Number of schools with advanced technology and services, percent by grade level
Table 20	Scheduling patterns in LMCs
Table 21	Frequency of work with teachers to develop units, percent of elementary school by category
Table 22	Frequency of work with teachers to develop units, percent of secondary schools by category
Table 23	Use of LMC during recent full week of school
Table 24	Categories of persons allowed to check out material from LMC
Table 25	Year of first library media specialist/librarian position
Table 26	Years worked as a library media specialist/librarian

For the four states with five or more combined schools (California, Michigan, Oregon, and Pennsylvania), the following additional tables are provided:

Table 27	Currentness of resources to support instructional program, percent of combined schools choosing each rank
Table 28	Quantity of resources to support instructional program, percent of combined schools choosing each rank
Table 29	Frequency of work with teachers to develop units, percent of combined schools by category

PART II COMMENTS

The purpose in collecting these data was to be able to present a timely snapshot of school library media centers (LMCs) in a variety of states. From the start it was understood that the nature of the sample would not permit in-depth analyses or generalizations beyond the sample. Within that context, this section presents some observations on four topics: Material Resources, Working with Teachers, Technology and Expenditures. Where appropriate, the focus is on the areas of "challenging subject matter" mentioned in the National Education Goals: English, mathematics, science, history, and geography.

Material resources

The questionnaire asked for both quantitative and qualitative data on the collection. Question 7 asked respondents to rate the currentness and quantity of resources to support the instructional program in fourteen subject areas. Possible ranks were: excellent, adequate, poor, and not applicable. Results for elementary schools are shown on Tables 9 and 10. Tables 11 and 12 cover secondary schools. Focusing on "mathematics" in all 12 states one notes that:

- The **currency** of resources to support math instruction is deemed **poor** for more than half of **elementary** LMCs in four states (AR, IL, KY, & MA), ranging from 50 to 92 percent.
- The **quantity** of resources to support math instruction is deemed **poor** for more than half of **elementary** LMCs in eight states (AZ, AR, CA, IL, KS, KY, MA & PA), ranging from 50 to 92 percent.
- The **currency** of resources to support math instruction is deemed **poor** for more than half of **secondary** LMCs in four states (AR, CA, IL, & MA), ranging from 56 to 90 percent.
- The **quantity** of resources to support math instruction is deemed **poor** for more than half of **secondary** LMCs in three states (AR, CA, & KY), ranging from 60 to 80 percent.

Data on Tables 9-12 are admittedly qualitative, but they do indicate that lack of materials significantly hinders the library media programs' ability to support mathematics instruction.

Question 10 asked for the copyright date of the most recent world atlas--a tool essential to instruction in geography. Table 15(12), which combines results from all 12 states, shows that in the fall of 1993 only 17% of 323 elementary schools and 20% of 343 secondary schools had a 1993 world atlas. The same table shows that in 31% of the elementary school LMCs and 21% of the secondary LMCs the latest world atlas is pre-1990. Students using a pre-1990 atlas are looking at maps of the now-nonexistent Soviet Union and at a divided Germany.

Question: 11 and 12 asked for average copyright date in two key areas of science: health/medicine (Q. 11) and space (Q. 12). A review of tables for all 12 states found that:

- Combining all states, 80 percent or more of elementary and secondary LMCs report that the average copyright date for health and medicine books is prior to 1990.
- For seven of the 12 states (AR, CA, IL, KS, KY, OR, & PA), over 90 percent of elementary LMCs report that the average copyright date for health and medicine books is before 1990.
- For three of the 12 states (CA, KS, & MA), over 90 percent of secondary LMCs report that the average copyright date for health and medicine books is before 1990.

Pupils using pre-1990 books on health and medicine are limited to out-dated information on AIDS, nutrition, and DNA mapping.

The situation is similar on the subject of "space". Table 17 for all 12 states reflects that:

- Seventy percent or more of elementary and secondary LMCs report that the average copyright for books on "space" is prior to 1990.
- In four of the 12 states (AR, IL, KY, & RI), over 90 percent of elementary LMCs report that the average copyright date for "space" books is before 1990.
- In five of the 12 states, (CA, IL, MA, OR, & PA), over 90 percent of secondary LMCs report that the average copyright date for "space" books is before 1990.

Pupils using pre-1990 books on "space" would have no information on Sally Ride, the Challenger disaster, or the Hubble telescope.

Expenditures

The inadequacy of material resources indicated above is a direct result of low expenditures for LMC materials. Table 3 for all twelve states shows the wide range of expenditures per school in 1992-93. For elementary schools the range is from \$15 to \$58,874. For secondary schools the range is from \$155 to \$100,810. This same table shows that mean expenditure per school (the average of all LMCs reporting) is considerably higher than the median (1/2 of LMCs reporting are below this amount) indicating that the mean is skewed upward because of several well funded schools. This pattern also exists in most states. In assessing the median expenditure per school in all 12 states it should be noted:

- The median is always lower in elementary school LMCs where it ranges from a low of \$1,417 in Massachusetts to a high of \$7,707 in Kentucky with Oregon not far behind at \$7,048.
- In secondary school LMCs the range is from a low of \$6,800 in West Virginia to a high of \$14,279 in Illinois.

In only one state, Kansas, was the median number of books acquired per pupil more than one in 1992-93. (During this same school year, the cost of an elementary book averaged \$15 and the cost of secondary books \$45.)

Table 2 shows that funding for LMC materials comes almost exclusively from local funds in all 12 states. Gifts and non-government grants are a distant second source with state funds and federal funds playing a minor role.

Technology

Many of the current ideas about improving education revolve around use of advanced computer and telecommunications technology. Question 14 asked respondents to indicate if their LMCs had any of 11 different such technologies. Table 19 displays results.

- Only one state (MA) reported that more than half of its elementary school LMCs have **computers with modems**. Seven states (CA, IL, KS, KY, MI, OR & PA) reported that more than half of their secondary school LMCs have computers with modems.
- Only one state (MA) reported that more than half of its elementary school LMCs have **Internet connections**. (The rest of the states fall below 15 percent for elementary schools.) Three states (KS, KY, & RI) reported that over a quarter of secondary schools have Internet connections.
- **Fax machines** are rarely found in elementary school LMCs in these states. The highest percentage of LMCs having a fax machine reported was 18 percent in Michigan. Most states reported in single-digit percentages. Fax machines are found in a quarter or more of secondary school LMCs in seven states (AR, IL, KS, KY, MI, OR, & PA). Two states (IL & PA) report more than 50 percent.

Working with teachers

Research has shown that students score higher on standardized tests when there is a high degree of collaboration between library media specialists and teachers. Question 16 asked respondents to indicate how often they worked with teachers in each of 10 key curriculum areas. The question gave 6 choices: weekly, monthly, quarterly, annually, never, n/a. For the purpose of this commentary, data were collapsed into 2 categories: never/annually and more than annually. Focusing on the 5 challenging subject matters and combining history and geography into "social studies" one observes that in **elementary school LMCs**

- Science and social studies are the curriculum areas where library media specialists work with teachers to develop units most often.

- Collaboration in both of these subjects is most common in Michigan where only 13% of respondents report meeting "annually" or "never" with teachers. Oregon is the state with the least collaboration in science where 48% of respondents report "annually" or "never". For social studies the least collaboration occurs in Pennsylvania where 45% of respondents report only "annually" or "never."
- Working with teachers to develop units in English happens most often in Massachusetts where only 16% of respondents report meeting only "annually" or "never." It happens least often in Pennsylvania where 68% of respondents reported working with teachers to develop units only "annually" or never."
- Math is the subject area in which library media specialists are least likely to work with teachers to develop units. The range of respondents reporting "annually" or "never" starts at 43% (MI) and goes to 93% (PA).

Scheduling patterns have a strong influence on the amount of collaboration that is possible. In schools where students are free to use the library at any time (i.e., flexibly scheduled) the library media specialist is available to plan with teachers and students individually, in small groups, or with classes. Where all classes are scheduled, the library media specialist is expected to teach or monitor a series of classes each day and has little or no time to work with individuals. The preferred pattern, flexible scheduling, is more common in secondary schools. Table 20 reflects that:

- in 3 states no elementary LMCs are flexibly scheduled (AR, MA, PA)
- in all other states from 9% to 22% elementary school LMCs are flexibly scheduled
- in 3 states (AZ, MA, WV) all secondary school LMCs are flexibly scheduled
- in most other states more than 85% of secondary schools are flexibly scheduled

The above comments illustrate how the tables that follow can be used to create a snapshot of LMCs in the twelve states surveyed. Although this was not a national sample, the authors believe these results are fairly typical. Those interested are invited to use the instrument in other states and with larger samples.

PART III RESULTS

ARIZONA

Table 1 (AZ). Dollars spent for material by funding source, 1992-93

Category	Range	Mean per school	Median per school
<i>Elementary</i>			
a. Locally budgeted funds	\$2,400 to \$10,000	\$5,527	\$4,500
b. Gifts and non-governmental grants (e.g., PTA)	\$0 to \$3,000	\$587	\$300
c. State funds	\$0 to \$0	\$0	\$0
d. Federal funds	\$0 to \$2,000	\$192	\$0
e. Other	\$0 to \$700	\$123	\$0
<i>Secondary</i>			
a. Locally budgeted funds	\$4,370 to \$27,500	\$12,659	\$9,500
b. Gifts and non-governmental grants (e.g., PTA)	\$0 to \$2,800	\$558	\$0
c. State funds	\$0 to \$0	\$0	\$0
d. Federal funds	\$0 to \$0	\$0	\$0
e. Other	\$0 to \$750	\$125	\$0

Table 2 (AZ). Dollars for materials, percent contributed by each funding source, 1992-1993

Category	Range	Mean per school	Median per school
Elementary

The South Carolina Study

The South Carolina Study is a population study of 1043 library media specialists in the state (as reported in the 1993 SC Basic Educational Statistics Report). The study was jointly sponsored by the University of South Carolina's College of Library and Information Science, the South Carolina Department of Education, and the South Carolina Association of School Librarians.

A mail survey was conducted in the Spring of 1993 with a response rate of 92% (N=960), including 692 categorized as elementary, 220 categorized as secondary and 29 categorized as combined (K-8, K-12). In addition to public schools, twelve prisons and three juvenile detention schools were included in the original study as well as special education schools within the 46 public school districts. In order to provide similar data to the rest of this report, the 19 special school respondents (9 prison/detention and 10 special education) were not included in the tables that follow.

Although a different questionnaire was used in the South Carolina study, some of the questions were alike enough that data are comparable to that collected in other states and could be presented for 9 of the 26 tables (Tables 3, 6, 7, 8, 18, 19, 23, 25, 26). For Tables 6 & 19, where differences in the questions might weaken comparability, notes have been provided below.

Full results of the South Carolina study will be available after August, 1994. More details are available from:

A. Jeanie McNamara
University of South Carolina

Table 6: Questions in South Carolina study are as follows for rows c, d, and f on Table 6:

- (c) "Please indicate how many periodical titles you are receiving this year including titles only on CD ROM or on fiche." A separate question asked about newspapers. The NCLIS/ALA survey asked for "serial subscriptions," a term that covers both periodicals and newspapers.
- (d) "How many microcomputer titles are on the library/media center's inventory? (whether they are housed in the media center or not)

- (f) "How many video items are housed in the library/media center? Include both video cassettes and videodiscs." Please note that some schools are taping centers for the Department of Education's Office of Instructional Television.

Table 19: Questions in South Carolina study are as follows for rows e, h, i, and j on Table 19:

"What kinds of technology are in your media center?" was followed by a list of technologies

- (e) combines answers to fax in LMC and fax available in building for LMC's use.
- (h) since this survey all middle schools and high schools with out ITFS towers have had fixed satellite dishes added so that 100% of secondary schools can receive educational television programming from SC-ETV
- (i) includes direct line as well as calls directed to the LMC from the main office
- (j) "video cameras are used for instructional and/or newscast purposes." Many elementary schools do live and taped student produced newscasts.

16-20	21	21	7
21-25	12	12	7
26-30	7	10	14

September 15, 1993

Dear Colleague:

WE NEED YOUR HELP!

The enclosed survey is the result of a cooperative project of the National Commission on Libraries and Information Science (NCLIS) and the American Library Association (ALA). Since the regular collection of school library media center statistics by the National Center for Educational Statistics (NCES) in the Fall of 1993 will not yield data for two years, the American Association of School Librarians (AASL) and the Office for Research and Statistics (ORS) have developed this abbreviated survey based on the questions in the library media portions of the Schools and Staffing Survey (SASS).

Your state is one of twelve being surveyed. The information you provide will give a snapshot of the condition of school library media programs in your state and provide data for public policy development on the federal and state level. It is important that you respond quickly and accurately. We need the truth about school library media centers. Individual responses will remain confidential; only aggregate data will be reported.

As a member of your state's AASL affiliate organization, you have been randomly chosen to be a participant in this very exciting and necessary data gathering project. Fifteen percent of your affiliate's building-level public school library media specialists will receive this questionnaire.

Thank you for taking the time to complete the survey. You are making a genuine contribution to the improvement of school library media programs in the United States. It may appear to be a small pebble in a large pond; but the wave you create will, indeed, reach a distant shore. The surveys should be returned as soon as possible, but **no later than October 8**.

If you have questions, call Pamela Kramer, AASL Deputy Executive Director, (1-800-545-2433, ext. 1395).

Sincerely yours,

Blanche Woolls
President**American Association of School Librarians**

American Library Association

50 East Huron Street

Chicago, Illinois 60611

(312) 944-6780

256

1. Are you currently employed as a school library media specialist at the building level in a public school?
(Check the appropriate response below).

_____ If YES, please complete and return the questionnaire in the enclosed envelope **no later than October 8, 1993.**

_____ If NO, please return the blank questionnaire in the enclosed envelope immediately.

2. What grade levels does this building serve? (Circle the appropriate number).

3 — Elementary

2 — Secondary

1 — Combined

3. How many students were enrolled in your building during the last school year? _____ students

4. During the 1992-93 school year, how much money was spent for materials from each of the following funding sources:

a. Locally budgeted funds	\$ _____
b. Gifts and non-governmental grants (e.g., PTA)	\$ _____
c. State funds	\$ _____
d. Federal funds	\$ _____
e. Other	\$ _____
TOTAL	\$ _____

5. Please report acquisitions, holdings, and expenditures for library media center (LMC) materials during the last school year (1992-93). Report only materials acquired for the LMC. Do not include books, magazines, tapes, etc. that were acquired and held by individual teachers or in classrooms.

For each category listed below:

Column A: Report the number of items acquired for this school's LMC during the last school year.

- For books, report the total number of volumes.
- For other materials report the number of titles; do not report duplicates.

Column B: Report the number of each type of item held at the end of the last school year.

- For books, report the total number of volumes.
- For other materials, report the number of titles.

Column C: Report the expenditures for these items during the last school year.

- Include only locally budgeted expenditures.
- Include expenditures for purchase and rental.
- Report amounts in whole dollars.
- NOTE: The total in column "C" should equal the amount listed in 4.a. above.

Category	(A) Acquired in 92-93	(B) Items held at end of year	(C) Locally budgeted expenditures
a. Books (number of volumes)			
b. CD-ROM titles			
c. Current serial subscriptions	—XXXXXXXXXXXX—		
d. Microcomputer software			
e. Other audio visual materials			
f. Video materials (tape & disc)			
g. Other			
TOTAL			

6. How is the LMC staffed? Please indicate the number of full-time employees (FTE) in each category.

For example:

- If someone works full-time, please record as 1.0.
- If someone works one half of the school week, please record as .50.
- If you have one full-time and one half-time employee in a category, please record as 1.50.
- If there are none in any category, record zero.

Total FTE

a. Certified library media specialists

b. Other professionals

c. Other paid employees—clerical staff, aides

7. Overall, how well do the LMC's *resources support the instructional program* of the school in each of the following subject areas? Please rate both currentness and quantity of resources for each area by circling the appropriate number. 3 = Excellent; 2 = Adequate; 1 = Poor; 0 = Not applicable.

Area	Currentness	Quantity		Currentness	Quantity
a. Biography	3 2 1 0	3 2 1 0	h. Literature	3 2 1 0	3 2 1 0
b. Fiction	3 2 1 0	3 2 1 0	i. Mathematics	3 2 1 0	3 2 1 0
c. Fine arts	3 2 1 0	3 2 1 0	j. Picture books/ easy readers	3 2 1 0	3 2 1 0
d. Foreign language/ English for speakers of other languages/English as a second language	3 2 1 0	3 2 1 0	k. Reference	3 2 1 0	3 2 1 0
e. Geography	3 2 1 0	3 2 1 0	l. Science/ technology	3 2 1 0	3 2 1 0
f. Health/guidance/ parenting	3 2 1 0	3 2 1 0	m. Social sciences	3 2 1 0	3 2 1 0
g. History	3 2 1 0	3 2 1 0	n. Vocational ed/ careers	3 2 1 0	3 2 1 0

8. How would you rate the entire collection in meeting the needs of multi-cultural education? (Circle the appropriate number). 3 = Excellent 2 = Adequate 1 = Poor

9. What is the copyright date of your *most recent* multi-volume encyclopedia?

19_____

10. What is the copyright date of your *most recent* world atlas?

19_____

11. What is the *average copyright date* of the books in the 611-613 ("Health/Medicine") portion of your collection?

19_____

12. What is the *average copyright date* of the books in the 629 ("Space") portion of your collection?

19_____

13. How many microcomputers are *under the supervision* of the library media staff?

14. Does this school's LMC have the following equipment or services? (Circle the appropriate number for each item).

	<u>Yes</u>	<u>No</u>
a. Closed circuit television	1	2
b. Computer with modem	1	2
c. Connection to Internet	1	2
d. Database searching with CD-ROM	1	2
e. Fax machine	1	2
f. On-line database searching (e.g. BRS, Dialog)	1	2
g. Periodical indices, encyclopedias, etc. on CD-ROM	1	2
h. Satellite dish	1	2
i. Telephone	1	2
j. Television studio	1	2
k. Video laser disc player	1	2

15. Which one of the following best describes the type of scheduling in the LMC? (Circle the appropriate number).

- 3 — Flexibly scheduled: classes, small groups, and individuals use the library as needed.
 2 — Some classes are regularly scheduled.
 1 — All classes are regularly scheduled.

16. How frequently did you work with classroom teachers to develop units in each of the following curriculum areas during the last school year? (Circle the appropriate number).

Subject	Weekly	Monthly	Quarterly	Annually	Never	Not Applicable
a. Arts and humanities	5	4	3	2	1	0
b. English	5	4	3	2	1	0
c. Foreign language	5	4	3	2	1	0
d. Guidance	5	4	3	2	1	0
e. Health/physical education	5	4	3	2	1	0
f. Math	5	4	3	2	1	0
g. Reading/language arts	5	4	3	2	1	0
h. Science	5	4	3	2	1	0
i. Social studies	5	4	3	2	1	0
j. Vocational/technical education	5	4	3	2	1	0

17. During your most recent full week of school, approximately how many students used the LMC?

_____ students

18. During your most recent full week of school, what was the total number of items (books and other materials) checked out from the LMC?

_____ items

19. Which of the following persons are allowed to check out materials from the LMC? (Circle the appropriate number for each item).

	<u>Yes</u>	<u>No</u>	<u>Not Applicable</u>
a. Pre-kindergarten students	1	2	0
b. Kindergarten students	1	2	0
c. Parents	1	2	0
d. Other members of the community	1	2	0

20. In what year did you begin your first library media specialist/librarian position (full-time or part-time) at the elementary or secondary level?

19 _____

21. Including this year, how many years have you worked as a library media specialist/librarian in public elementary or secondary schools?

_____ years

THANK YOU VERY MUCH FOR COMPLETING THIS SURVEY. Please return it by October 8, 1993 to the:
 American Library Association, 50 E. Huron St., Chicago,
 IL 60611-2795. ATTN: AASL/NCLIS STATISTICS SURVEY.
